

Yale Quantum Institute presents

Werner Sun

Visual Artist

Taking a [Random Walk](#)
A scientific approach to [art](#)

As two ways of knowing the world, art and science have been labeled either as diametric opposites or as strange bedfellows. Can both descriptions be correct? Ithaca-based visual artist with

exhibitions in north America, Werner Sun discusses how his background in physics informs his work with sculpted images, in order to spark a conversation about the intersection of art and science.

This talk is open to all and will be accessible to students, researchers, the wider university public and the New Haven Community.

Tuesday, January 28 at 7:30 pm
Sloane Physics Laboratory 59. 217 Prospect St

This event is co-sponsored by The [Franke Program](#) in Science and the Humanities
